

ABDUL BASIT SHAHID

Backend / Full-Stack Developer • Laravel & PHP enthusiast

Lahore, Pakistan | 03299696192 | basitdogar59@gmail.com | github.com/basit-shahid | abdulbasitshahid.vercel.app

SUMMARY

Software Engineering undergraduate (COMSATS University Islamabad, Lahore Campus) specializing in Laravel and PHP backend development, with hands-on experience building full-stack applications, RESTful APIs, and role-based systems. Comfortable across the stack with Node.js, Express.js, and modern frontend tooling (Next.js, React, Astro). Strong foundation in Data Structures & Algorithms, OOP, and database design. Seeking a Laravel-focused Backend / Full-Stack Developer internship to contribute to production-grade systems and grow as an engineer.

TECHNICAL SKILLS

Backend: Laravel (Eloquent, Middleware, Queues, Auth/RBAC), PHP, Node.js, Express.js, REST API Design

Frontend: Next.js, React, Astro, JavaScript/TypeScript, Tailwind CSS, HTML5, CSS3

Databases: MySQL, PostgreSQL, Query Optimization, Relational Schema Design

Tools & Platforms: Git & GitHub, Docker, WordPress (custom builds & plugin development), Electron.js, Vercel

Core CS: Data Structures & Algorithms, Object-Oriented Design, Software Architecture Fundamentals

PROJECTS

FastFood Invoice Management System

Laravel, PHP, MySQL, Docker

- Architected and built a full-stack invoice management system for fast-food restaurants using Laravel, implementing role-based access control (RBAC) to separate admin, staff, and guest permissions.
- Designed a guest-profile and passwordless (OTP-less) login flow, reducing friction in the order-to-checkout path while preserving auditability of every transaction.
- Built an end-to-end order billing workflow (order creation → invoicing → payment record) backed by a normalized MySQL schema.
- Containerized the application with Docker to standardize local setup and simplify deployment across environments.

Repository: github.com/basit-shahid/fastfood-invoice-system

TurboDM — Multi-Threaded Download Manager

Electron.js, Node.js

- Engineered a Windows desktop download manager capable of accelerating downloads using up to 32 parallel connections via a custom multi-threaded core.
- Built a responsive, neon-themed Electron UI on top of a Node.js backend handling connection pooling, chunked downloads, and file-merge logic.

Repository: github.com/basit-shahid/turbodm

Drop — Developer File Utility

Electron.js, JavaScript

- Built a lightweight drag-and-drop file transfer utility for developers with instant multi-format file handling and a clean dark UI.
- Optimized transfer performance and UI responsiveness for large batch file operations.

Repository: github.com/basit-shahid/drop

EDUCATION

COMSATS University Islamabad — Lahore Campus

Spring 2025 – Present

Bachelor of Science in Software Engineering

- Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Discrete Structures.

CURRENTLY STRENGTHENING

Advanced data structures (Trees, Graphs, Dynamic Programming) • Backend & API architecture for high-traffic systems • Node.js in tandem with Laravel • Developer tooling and CLI utilities.
